## **DEDICATION**

This book is dedicated to the memory of Dr. Clare M. Jephcott and Mr. Robert J. Woolley, who developed and nurtured the field of BNA perfin collecting.

## **SPECIAL ACKNOWLEDGEMENTS**

### **For the 5<sup>th</sup> Edition**

Mark B. Fennell for his work and promoting to get this Edition completed and to Conrad M. Tremblay for doing the bulk of the work on the perfin issue listing.

To the Members of BNAPS Perfin Study Group, who reported updates and made the issuance of Edition 5 necessary with special thanks to Barry Senior, Dave Hannay, David MacLellan, David Rhodes, Gary Nummelin, Jack Brandt, Jim Graham, Ken Copleston, Ken Pugh, Marvin Goldstein, Olivier Philibert and Ron Whyte.

With special thanks to the Canadian Museum of Civilization, The Perfin Society (Great Britain), in particular Rudy Roy, The Perfin Club (United States) and to Michael Millar for their information and help in advancing Canadian perfin knowledge.

### **For the 6<sup>th</sup> Edition**

The extension from the 5<sup>th</sup> edition was done with information gathered by Conrad M. Tremblay in the 1980's/1990's and entered into the 5<sup>th</sup> edition by Ron Pazdzierski and Jim Graham to form the 6<sup>th</sup> edition. Thank you Ron and Jim, for all the work on this edition. Also Barry Senior and Dave Hannay for their information placed into the 6<sup>th</sup> edition.

Special thanks to the Vincent Graves Greene Philatelic Research Foundation for their storage and archiving of Canadian perfin research information and their support of perfin collecting through their expertizing of officials and other perfins.

## PREFACE

This book is designed as a working handbook for collectors of Canadian perfins (perforated insignia). As such, the information is spread out to leave room for notes, comments, and additions. The details listed are as complete as the BNAPS Perfin Study Group could provide at the time of publication. Due to the method of production and procedures for their use, a complete record of perfins will probably never exist. One of the pleasures of collecting perfins is that additions and expansion of the known range of use of perfins can be found by spending time rather than money. Anyone, regardless of length of time they have been collecting stamps, has an equal chance of discovering the scarcer perfins.

For the collector interested in the history of their subject, perfins is the perfect field. Most of the perforators (the machines which perforate the stamps) have had their physical location identified, but the perfins were much more portable and could be mailed from different cities. Some companies gave perfins to their salesmen to mail reports or orders back to the head office and other companies sent the perfins to branch offices, which were not large enough to justify a postage meter or their own perforator. The result is that tracing perfins can be an interesting study.

Then there are the usual items, which make more sense once their history is discovered. An example of this would be the Great Northern Railway's use of Canadian perfins G9 and G10. The Great Northern purchased Canadian stamps in Winnipeg, Manitoba, the closest Canadian city to their head office in St. Paul, Minnesota, where the stamps were perforated. The only Great Northern station of note in Canada was New Westminster, British Columbia, where the perfins were used. The surprise came when collectors found that all of the later Great Northern perfins had Winnipeg tagging, even though the stamps were never mailed from Winnipeg.

Whether or not you are interested in studying the history of perfins, there are three basic ways perfins can be collected.

A. The easiest way to collect perfins is by collecting one example of each perfin, as listed in the handbook. This is called a **Perfin Type** collection.

B. If you collect a copy of every issued stamp perforated by every perforator, you have a **Perfin Issue** collection.

C. Finally, there is the **Perfin Position** collector, the specialist who is trying to find each issued stamp perforated by each perforator in as many of the eight positions as possible.

Each of these three basic collecting approaches can be expanded to encompass the collecting of stamps, covers, or specific areas of personal preference. Some collections of specific areas known to the editors are: 1898 Map stamp, Small Queens, Admirals, 1967 Definitives, and the 1933 Royal William.

It should be noted that the members of the British North America Philatelic Society's Perfin study group gathered the information offered in this handbook over a period of 30 years. Thus, the information gathered is substantial in volume and reviewed for accuracy, but it cannot pretend to be the final word on Canadian perfins. Hopefully, it is the latest word. The BNAPS Perfin Study Group continues to exist for the exchange of new information and research. To those who may find

new perfins, expand the reported dates, or discover new information, the Perfin Study Group is very interested in being advised of your findings so that other collectors can be informed. If you wish to contact the Perfin Study Group, either contact a BNAPS member, the Perfin Study Group address is in all BNAPS journals, or make contact through the BNAPS web site. Back issues of the Perfin Study group newsletters can be read at [www.bnaps.org](http://www.bnaps.org).

## INTRODUCTION

This handbook represents an updating of the information known about Canadian perfins and is to coincide with the expansion of interest in perfins among philatelists. As this is not the final word on Canadian perfins, space has been made available throughout the book for additions and notes. With the unfortunate destruction of much of the known records by fire, war, and natural limitations in record maintenance, it is doubtful whether the whole perfin story will ever be told.

## What is a Perfin?

For the purposes of this handbook, the definition of a perfin is taken from the quarterly supplement of the Postal Guide for April 1910, which states:

"No objection is made by the Department to the perforation of postage stamps with the distinctive marks (initials or other) of the individual or firm using them, but it must be understood that the designs employed should be for the purpose of identification, and not for advertising. The perforations shall not exceed one-thirty-second of an inch in diameter, and the whole space occupied shall not exceed one-half inch square."

The Post Office's approval in 1989 of the Bees Stamps perforation indicates that there has been some relaxation from their 1910 guideline as the holes in this last perfin are larger than one thirty-second of an inch in diameter. As Cummins or American perforators do not appear to be readily available some change is not a surprise. Therefore, we have endeavoured to maintain the intent of the guidelines but have made the following relaxations:

- the perforation need not have been approved by the Post Office
- both postage and revenue stamps are included
- the hole size may exceed one-thirty second of an inch

In the same vein,

- it is understood that the perforation is applied prior to the stamp being used, to deter pilferage. When the stamp is perforated after being applied to something (like a document) the perforation is deemed to be a cancel, which is dealt with separately in Addendum D.

- perforations used for advertising (philatelic) purposes are listed in Addendum D. If there is a question that the perforation is for advertising (philatelic perfins), the parameters chosen are:

- (a) due to the increasing use of postage meters and the declining use of perforators, any perforator purchased and put into use after 1950 was obtained for advertising purposes and, therefore, classified as a philatelic insignia and not included as a Canadian perfin.

(b) Post Office approval supersedes (a), there being only one example.

The Post Office explanation excludes the double letter punches and cancelling perforations, some of which have appeared in Editions 1, 2, and 3 of this handbook. To avoid confusion, these punches and cancelling perforations are in Addendum D. Single letter punches are not considered in this book. Newfoundland perfins prior to 1949 are not governed by the above regulations; however, Newfoundland perfins are included (excepting cancelling perforations – see Addendum D) when the perfins meet the intent of the Canadian regulations

Where identifiable, each perforating machine has been given its own number. When a machine has had all of the dies replaced, it is deemed to result in a new machine. However, when the dies are retooled to a larger hole size, being a noticeable change the new dies are deemed to be a subgroup of the perfin, as in the later use of Canadian General Electric (C16). When pins are missing or replaced this is deemed not to be a change to the machine and is not reflected in the numbering system. Die differences within a machine are function of the method of manufacturing of the machine are not considered in this book. Incomplete perfins, which could be mistaken as something other than what appear to be, are located in the book by their apparent initials and identified as to where they should be properly listed. Note: some of the future discoveries may also fall into this category.

There are several subjects that are referred to in this handbook that are not considered in detail. They are reviewed here.

## **Perfin Value**

The determination of a fair value of any given perfin is complicated by the three different ways they are collected. A Type collector is almost always willing to pay more for a new Type than an Issue collector is willing to pay for an addition of a Type he already has. And a Position collector will usually pay less than an Issue collector. Thus, there is considerable discrepancy among perfin collectors as to how much each would consider paying for a specific stamp with a given perforation. This does not necessarily take into consideration the catalogue value of the used stamp without holes. An incomplete perforation or damage to the stamp will lower a perfin's value. An over-generalization relating to perfins is that they are inexpensive compared with other areas of philatelic collecting. The present scope of prices (2012) is 15¢ to more than \$300 per perfin with most perfins falling in the range of 25¢ to \$5. **Note:** the existence of a perfin in a stamp does not lower it below regular UNITRADE (SCOTT) used catalogue value as is the case in some countries around the world.

## **Mint, Contrived and Fake Perfins**

A problem that has a few collectors apprehensive is the hypothetical ease of making 'fake' perforations and problems with the 'contrived' or 'favour' perfins. Contrived perfins are perforated by someone (sometimes, unfortunately, a stamp collector) who has access to a perforator. This has resulted in Small Queens perforated on

2019 10 01

machines that were not built until the 1930s! Obviously, this is a potentially serious problem, but it would appear that the size of the problems is not large, as most perfin collectors realize the potential difficulties. As a rule, collectors ensure the security of the few discovered perforating machines by helping to arrange that the machines are lodged in a museum or archives, properly identified.

Contrived or favour perfins. The 5-hole OH/MS was not used by the Canada Post office until July 1, 1939.

The problem of 'fake' perforations is another matter, and collectors have virtually no control over this. Although anyone can poke a hole in a stamp, very few collectors should be caught by such simple methods, as one's eyesight and experience can play a significant difference. It is generally acknowledged that in Canadian perfins, fakes are mainly a problem in the 5-hole OH/MS (08), and much less significantly, in the 4-hole OH/MS (09 and 010). In some cases, 'fakes' with holes that are out of alignment, improperly cut, or of such an unusual size, can be identified with some practice. The serious problem is the more expertly produced 'fake' which cannot be readily identified as such. At this point, most collectors will have to reserve judgement or trust that their source has both honesty and expertise in supplying good material or have someone expertise the perfin. In the 5-hole OH/MS (08), the more unusual perfins (ie. coils, perf-imperf pairs, higher catalogue price) the greater the risk of fakes. Fake perfins do exist and people have been convicted of criminal charges relating to perforating stamps with the intent to defraud collectors.

Fake strip of four 5-hole OH/MS (08) stamps.

In a similar vein, as stamps were originally perforated to prove ownership and to deter the theft of stamps, the possession of mint perfins is usually considered to be improper. An exception to this is the 4-hole OH/MS (09 and 010) which were sold across philatelic counters by the Post Office. Most likely the majority of mint perfins, other than the OH/MS, were originally stolen from the company that did the perforating so, technically, anyone having mint perfins probably has in their possession stolen property – a criminal offence. It may be possible to prove that possession of mint 'Contrived' perfins is not illegal, but as mentioned earlier, this is generally frowned upon by perfin collectors.

## Chapter 1

# THE ORIGIN OF PERFINS

The origin of perfins starts with the Oxford Union Society of Oxford, England, who provided stationery and postage to its members without charge. As the use of postage stamps grew, the Society sought to reduce losses in the postage stamps that could not be accounted for. One must keep in mind that in the 1850s, a person could sell Penny Red stamps back to the Post Office or use them to pay a bill. At that time, five stamps would buy a good meal.

Overprint

Underprint

Early Perfin

In 1859 permission was granted by the Post Office for the Society to have postage stamps overprinted with the letters of 'O.U.S.' between two wavy lines. In 1869, the Society was instructed by the Post Office to have its overprint transferred to the back of the stamp to fall into line with the practice adopted by business firms in 1867. Several firms approached the Post Office for permission to overprint their own stamps and the Post Office raised no objection, providing the overprint was applied to the back of the stamps so as not to deface the image of Queen Victoria.

Perkins, Bacon & Company – the stamp printers – applied the underprint before the sheets were gummed and in the same coloured ink that was used for printing the stamps. The firms that applied for authorization for the underprint were: J & C Boyd & Co., 7 Friday Street, London – February 1867; W.H. Smith & Sons – April 1867; Copestake, Moore, Crampton & Co. – November 1867; Oxford Union Society – January 1870; and Great Eastern Railway - 1873.

It is apparent that the majority of firms were more concerned with preventing theft of their unused stamps than with the stamps being postally misused. There are a considerably greater number of unauthorized underprinted stamps that were printed on top of the gum. These could not be identified as to owner after being placed on an envelope as the under print would blur, if not totally disappear, after the gum was moistened. One survey of these unauthorized printings showed 4 types of overprints and 30 underprints. With the recognition by the Post Office of the perforating procedure, permission to use the underprints was withdrawn in 1882. **Note** that the Post Office approval to use overprints was reinstated in 1903.

Joseph Sloper patented his first machine, a cheque protector, in 1858. In 1868, he patented a machine for puncturing railway tickets. Apparently, Copestake, Moore, Crampton & Co., - wholesale drapery warehousemen who were using Sloper's cheque protector – had a case of larceny of their stamps by an employee. In October 1867, the firm asked the Post Office for permission to perforate incoming stamps immediately upon arrival with the initials 'S.C.', which were the initials of the senior partner, Samson Copestake. The stamps purchased by the firm from the

2019 08 01

Post Office were underprinted as mentioned before, but some stamps that were received in payment for small sums were unmarked in any form. The Postmaster General granted permission for the underprinting on the incoming stamps but ignored the request for permission to perforate the stamps.

Early GB perfin cover

After several more requests by Copestake, Moore, Crampton & Co., Mr. Sloper became involved and had further difficulties in obtaining permission to perforate stamps. Eventually, on March 13, 1868, the following letter was addressed to Mr. Sloper.

*General Post Office  
13<sup>th</sup> march 1868*

*Mr. Sloper,*

*Sir, - The Postmaster-General has had under consideration your letter of the 27<sup>th</sup> ultimo, and His Grace desires me to inform you that, under the circumstances, he will not object to the perforation of postage stamps in the manner described by you, with a view to protect merchants and others, as far as possible, from the theft of the stamps used by them.*

*I am, sir,  
Your Obedient Servant  
R. Parkhurst*

2019 08 01

It was not, however, until March 1, 1869, that the Post Office advised its Postmasters that Sloper's security system of perforating stamps with the firm's initials had been approved. This was done in the Post Office bulletin of that date:

#### POSTAGE STAMPS

*In consequence of representations made to the Post Office by various firms that their Postage Stamps are purloined by persons in their employ, the Department has recommended that the name or initials of the Firms, etc., be perforated through the stamps so that, inasmuch as the Sale of such stamps would be thereby rendered difficult, the temptation to steal them might be lessened or altogether removed.*

*Postmasters will take care not to purchase any postage stamps thus marked which may be offered to them for sale.*

Most likely, no one realized that Mr. Sloper still had a patent for the perforating machines and, as such, he was entitled to a monopoly for at least four years. His business expanded as a result, and he began to do business throughout Britain and the continent.

1873 Photo of Joseph Sloper

Mr. Sloper's first patent expired on August 13, 1872. By 1873, the competition was becoming active. The leading competitors were Den Fisher, London stationer and Francis Hancock, printer and stationer. In the beginning, the perforating cost was free after an initial cost for manufacturing the die or dies was paid. Free perforating was offered because these firms received 1% poundage, the term used to describe the commission paid by the Post Office for the sale of Postage. It was apparently sufficient revenue to keep the perforating of stamps popular with many firms. In this position, some perforating machines were sold outright to stamp users, but most of the firms preferred to perforate on order so that they could confirm their poundage income.

On November 26, 1877, the Post Office announced that effective December 1, 1877, the 1% poundage allowed stamp vendors on all stamp purchases would be discontinued. This came as a severe blow to the revenue of the firms who perforated stamps, but who were not Postmasters.

The Postmasters continued to enjoy the poundage up to June 30, 1879, at which time a maximum poundage income of £400 per year was set. This latter order primarily affected the Postmasters who were perforating stamps. Mr. Sloper, for example, had his poundage income reduced by about £600 per year. The result

2019 08 01

was several hard years for the firms perforating stamps on order. Such firms, to make up for the loss of the commission began to charge for all stamp perforating, thus putting the burden on the user. Despite these initial financial difficulties, the use of perforated stamps became much more popular as time went by.

In 1872 Belgium authorized the use of perfins for security reasons. In 1878 Germany, France, Denmark and Switzerland also approved their use. New Zealand approved the perforating of stamps, postcards, and newspaper wrappers in 1883. The first United States perforating machine was produced in 1887; however, the U.S. Post Office did not sanction the use of perfins until 1908.

Joseph Sloper received U.S. Patent No. 155340 on September 22, 1874, for "invented improvements in perforating-stamps for producing perforations (grouped to represent marks, letters, figures or devices) through paper and other materials". Benjamin F. Cummins and John Stenwall Jr. of B.F. Cummins Company of Chicago, IL, patented their first perforating-stamp on August 20, 1889. The April 9, 1908, U.S. Postal Bulletin permitted the perforating of postage stamps with letters, numerals or other marks for identification purposes only. Any use of perfins in the United States prior to 1908 was limited, although the machines to make them were available well before that time.

In Canada, stamps were perforated for identification as early as 1887. The Canadian Post Office acknowledged the existence of perfins in 1895, stating that it had no objection to the practice of perforating stamps with initials of the individual firm using them. It was not until 1910 that the Post Office ordered that the perforations must be approved prior to their use, and that the perforations not exceed specified limits.

Earliest reported perfin cover sent to Canada

## Chapter 2

# THE USE OF PERFINS IN CANADA

The problem of preventing pilferage of stamps by employees was apparently as serious in Canada as it had been in England and the measures taken for the correction of this abuse seem to have followed much the same lines.

Although we have no record of any firm officially printing its name or other identification on postage stamps, we do occasionally come across a stamp, generally of the Small Queen period or earlier, which has been rubber stamped with the name of the user. This practice was unauthorized, and no doubt discouraged by the Post Office due to the disfigurement of the stamp design, and the fact that many similarly coloured cancellations were in use in that period.

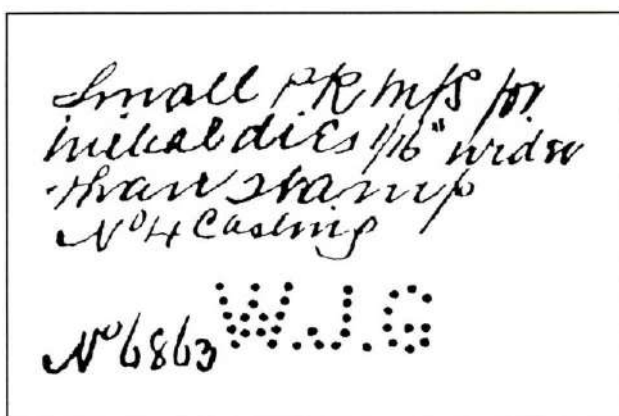

The first official notice of perforating stamps in Canada appeared in the Canada Official Postage Guide in January 1895. It reads:

*Persons or firms using very large quantities of stamps may also arrange with the Department to have the stamps they purchase perforated with their initials at their own cost.*

From the wording of the above paragraph, it is not clear whether or not it was the intention of the Post Office to do the actual perforating, but it did give permission, after receiving official sanction, for a firm to adopt the practice if it so desired. In 1896 the regulation was changed to read:

*Perforated Stamps: No object is made by the Department to the perforating of postage stamps with the initials of the individual or firms using them.*

With this change, permission was no longer required, and this situation lasted until 1910. Prior to 1910, no record was kept by the Post Office of users who took advantage of these regulations, and no limitation was placed on the size of the holes or on the area to be covered by the design.

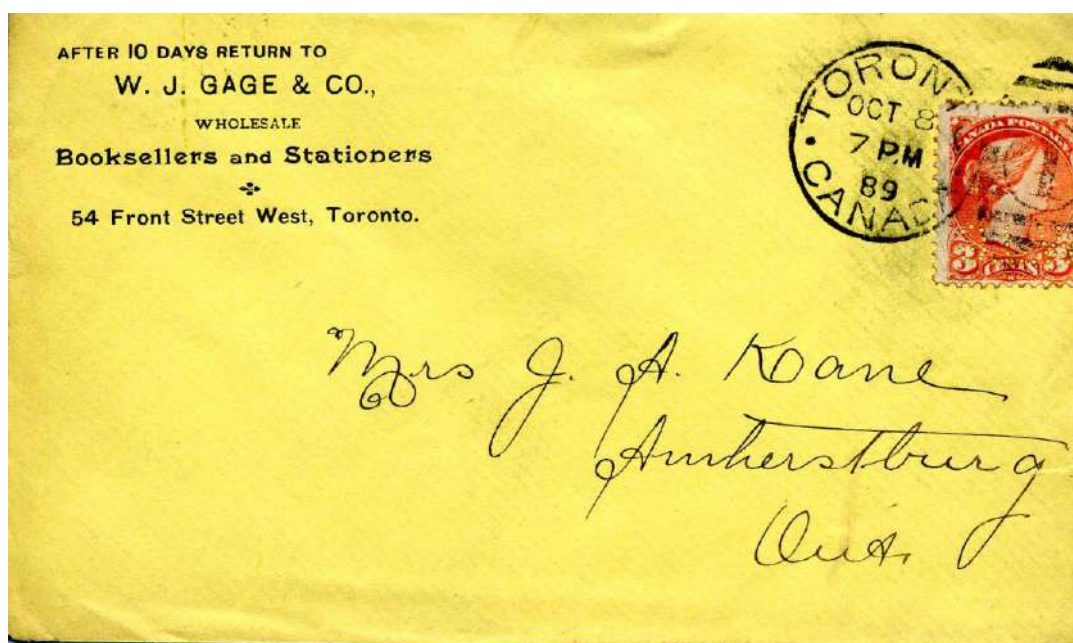

Sloper W.J.G Proof

The first perforator used in Canada was a Sloper Model #4, single die, serial number 6863, machine proofed by J. Sloper & Company in London, England, in

2019 08 01

1887. Perfin W.J.G (W10), ordered by W.J. Gage & Company, has been found used on October 2, 1887. The earliest use of a Gage perfin on a postcard is January 31, 1889. On cover, earliest use of a Gage perfin is October 8, 1889. The (W10) perforator was destroyed in the Great Toronto fire of April 19, 1904, which destroyed much of the business center of Toronto. On March 14, 1905, Sloper shipped a replacement single die machine (W9), S/N 9274, to W.J. Gage.

W.J. Gage & Company were text book publishers and stationers also carrying office equipment and supplies. It is believed that they also were distributor for Sloper perforators. The Sun Life Assurance perforator S.L/ACo. (S15), first used in 1899, is a four die (2x2) perforator most likely from Sloper. On December 18, 1912, Sloper shipped a four die (2x2), S/N 61871 to William Tyrrell & Company (W15), Toronto. A fair number of Canadian perfins have traits of Sloper dies but the loss of much of their records when their factory in London, England, was destroyed during World War II may prevent identification of all their perforators in Canada.

Earliest Reported Canadian Perfin Cover, dated October 8, 1889

The other perfins which have been found in the Small Queen era are J.H. Semple (J7) of Montreal, first used January 21, 1896. J.H. Semple was the Director-General of The British Empire Exposition, 1896. IC/R (I1), used by the Intercolonial Railway at Moncton, NB, was used as early as January 31, 1889. The fourth user was S.L/ACo. (S15), first used by Sun Life Assurance Company of Montreal on December 20, 1889 and has been found in both the Queen Victoria Widow Weed stamps.

The quarterly supplement of the Postal Guide for April 1910 states:

*No objection is made by the Department to the perforation of postage stamps with the distinctive marks (initials or other) of the individual or firm using them, but it must be understood that the designs employed should be for the purpose of identification and not for advertising. The perforations shall not exceed one thirty-second of an inch in diameter, and the hole space occupied shall not exceed one-half inch square. The perforating must not be done in such a manner as to prevent the stamp being easily recognized as genuine and not one that has been previously used. The use of ink or other coloring matter in connection with the perforating is prohibited. Individuals or firms desirous of using perforated postage stamps must first make application to the Postmaster General, submitting their proposed designs, and obtain permission for their use.*

The Canada Official Postal Guide 1944-1945, under section 230 states:

*No objection is made by the Department to the perforation of postage stamps or post cards with the distinctive marks (initials or other) of the individual or firm using them, but it must be understood that the designs employed shall be for the purpose of identification, and not for advertising. The perforation shall not exceed one thirty-second of an inch in diameter, and the whole space occupied by the identifying device shall not exceed one-half inch square. The perforating must not be done in such a manner as to prevent the stamp being easily recognized as genuine and not one that has been previously used. The use of ink or other colouring matter in connection with the perforating is prohibited. Individuals or firms desirous of using perforated postage stamps or post cards must first make application to the Postmaster General (submitting their proposed designs) and obtain permission for their use.*

According to Post Office records, 80 applications have been approved since 1910. For a detailed listing, see Addendum A. The number in each year is as follows: 1910-twelve; 1911-eleven; 1912-twenty; 1913-eight; 1914-six; 1915-four; 1917-two; 1920-three; 1922-one; 1923-three; 1924-one; 1925-two; 1926-two; 1927-one; 1928-one; 1931-two. Since 1931 there has only been one approval although the regulations remain in force.

Earliest Reported Canadian Perforated Stamp, dated 1887

The first firm to receive Post Office approval for its perforation was Ryrie Brothers of Toronto, accepted on March 23, 1910, which is before the Post Guide for April 1910 came into effect. It is noteworthy that several Government departments and

2019 08 01

agencies did not obtain approval for their perforations. In the Federal Government, the following sectors do not have Post Office approval: MD (M9) Militia Department; ND (N3) Department of National Defence; CBC (C6) Canadian Broadcasting Corp.; and 4-hole OH/MSs (09, 010) Canada Post Office. The perforations used within Provincial Governments without approval are: PEI (P8) Province of Prince Edward Island; Q/CLQ/C (Q1) Quebec Liquor Commission; and W/CB (W5) Workmen's Compensation Board of British Columbia. The last Government perfin approval was given on October 26, 1931, to the Province of Ontario's LA (L1). The last business perfin approved was Bees Stamps' BB (B4) on July 17, 1989.

The only change that has been made to the perforation regulations since 1910 is that permission was granted for the similar perforation of postcards (1928).

Although no mention has been made of postal stationery in the Post Office regulations, three perforations are found in postal stationery. The Sun Life Assurance Company is the only private company, so far reported, as perforating stationery. The 1897 postal band, 1¢ Q.V., Webb's W6 was perforated S.L/ACo (S15). The 1938 1¢ George VI issue postal bank was perforated OH/MS with both the 5-hole (08) and 4-hole (09), Webb's DW20b and DW20c respectively.

Earliest Reported Canadian Perforated Stationery.

The progressive use of postage meters has made the security function of perforations now obsolete for both firms and Government sectors. The 4-hole OH/MS (010) was replaced by the OHMS overprint which itself was soon replaced by the G overprints. Although the security of postage remains a concern to many firms, the use of perforated stamps in Canada has stopped.

At last report (2011) no perforations are in regular use, although a few machines still remain accessible in accounting departments and could potentially be used.

## Chapter 3

# PERFORATING MACHINES

Before proceeding further into the study of perfin, we might do well to know something about the machines that made them. There were several companies which manufactured stamp perforating machines, along with other types of business equipment.

As mentioned in Chapter 2, the first postage stamp perforator used in Canada was a Sloper Model #4, single die perforator (serial number 6863) which was proofed in England in 1887. The perforator (W10) was ordered by W.J. Gage & Company for its Toronto office. This perforator was destroyed in the Great Toronto fire of April 19, 1904. On March 14, 1905, Sloper & Sons shipped a replacement single die perforator (W9) to W.J. Gage & Company. Sloper & Sons shipped a four die Sloper perforator (W15) to William Tyrrell & Company on December 18, 1912. (The editors have not located a photo of a Sloper Model #4 nor a Sloper four die perforator.) The Sun Life Assurance Company (S15) perforator has been plated as a four die machine so it may also have been made by Sloper.

Cummins Model 14

Cummins Model 52

The machine that has had the widest distribution in Canada is Model 52 from the B.F. Cummins Perforator Company of Chicago, Illinois. This machine has a width to accommodate a row of five regular sized (George V Admiral) stamps which necessitates a sheet of stamps being folded or separated in half prior to the perforating operation. These groups of pins forming the set of initials are so spaced that when one-half sheet of regular sized stamps are perforated, the design appears in the center of each stamp. It is common, therefore, to find more recent stamps with their varying sizes having split or off-center perforations and, of course, double-sized stamps will contain part of an extra set of initials, or two sets due to the width of the stamp.

Quite a few of the earlier perforators, by plating, can be proven to be single die machines. In some cases, these perforators were later replaced with larger capacity perforators as the volume of required perforated stamps increased. As a result, few of these single die perforators are likely to be found. At present, the

2019 08 01

only single die perforator, manufactured in North America that is known to exist is the a Cummins Model 14 operated by Ogilvie Flour Mills Company in Winnipeg (04). The Cummins Perforator Company specifications for this machine have not been located.

Model 52 shown above has a base measuring 12½" x 5" and weighs 23 pounds. The base is made of cast iron while the balance of the machine is steel. The listed capacity by B.F. Cummins is as follows:

*Three or less initials on each stamp – four sheets thick  
(20 stamps at each stroke, row of 5)*

*Four initials on each stamp – three sheets thick  
(15 stamps at each stroke, row of 5).*

*Five or six initials on each stamp – two sheets thick  
(10 stamps at each stroke, row of 5)*

*Stamps can be perforated at the rate of 300 to 500 per minute.*

The second most common perforator is the Cummins Model 53. This machine, shown below, has a capacity to perforate a row of 10 regular sized stamps or five large sized stamps (a common size sheet for its time) with its 10 dies. Model 53 has a base measuring 17¼" x 5" and weighs 33 pounds. With its capacity being double that of Model 52, Model 53 was used to produce many of the more common perfin.

Cummins Model 53

American Model 6k

The Cummins Model 56 is an electrically operated machine; otherwise, it is identical to Model 53. Being operated electrically and controlled by a foot pedal, the operator can perforate stamps much more quickly using Model 56. None of the Model 56 machines have been confirmed to be physically located in Canada. The only confirmed machine is that of the New York Life Insurance Company, New York City (N6), where it was still in the mail room and perforating U.S. stamps in 1985.

To date, one American Perforator Company of Chicago, Illinois, machine is confirmed to have been used by a Canadian company. It is Model 6K and is very similar to the Cummins Model 53 both in size and capacity. It is believed that Cummins was no longer manufacturing perforators when the Canadian National Railways ordered its last perforator, (C24), from the supplier and, therefore, had to purchase the American brand perforator.

The perforations made by the machines mentioned conform to the requirements of the Post Office, i.e. holes not over one-thirty-second of an inch in diameter, and total space covered not over one-half inch square. Usually the pins are so arranged that when sheets of stamps are fed through the machines from top to bottom, face up, the initials will be horizontal and properly oriented when viewed from the face of the stamp. Occasionally, the pins are so arranged that the initials read vertically.

A sheet of stamps can be fed into the machine in eight possible different ways: any of the four sides of a sheet with the stamp design face up and any of the four sides with the gummed side up. So it is possible to find a perforation in any of eight different positions. Refer to Addendum C.

The Cummins Model 52, if a folded sheet was fed into it could produce mirror pairs with one position being the normal and the other reversed. These pairs are scarce, as they are usually separated when applied to the mail.

Carelessness on the part of the operator of any of the various types of perforators produces stamps with double perforations; some perforated obliquely and, occasionally, some with two impressions, being different positions.

Damaged dies which result in incomplete perfins are usually the results of the pins falling out of the perforator. It is presumed that the pins can be broken when they slip out of the guide but no one has reported trying this exercise. When many of the pins are missing, the damaged perfin can be quite difficult to identify. In some cases, a damaged die double perforation or complete perforation with a second perforation from which one or two pins cut the stamp can result in a perfin which appears to have an unrecorded code hole or two.

The following list of perforating machines has been physically confirmed by viewing each machine, excluding 08, 09 and 010, which are taken from Government equipment inventory lists.

Make	Dies	Perforation
Sloper Model ?	1	J10, W9, W10
Sloper Model ?	4	S13, W15
Sloper Model ?	5	A11, A12
Cummins Model 14	1	O4
Cummins Model 52	5	B12*, C15, C16, D4*, G6*, G8*, G17*, G18*, G19*, G20*, G21*, G22*, G23*, I5*, I6*, I7*, I8*, I9*, I10*, I11*, I12*, I13*, I14*, I15*, I16*, I17*, I18*, I19*, I20*, I21, I22*, L1, L8*, M9*, M23, M28, N3*, O1*, O8, P4*, P5*, P6, P8, Q1*, R3*, S22*, W7*
Cummins Model 53	10	C6, C21, C26, C28, C46, O9, O10, P19, S2, W5
Cummins Model 56	10	N6
American Model 6K	10	C24, E1

Not Confirmed \*

## Chapter 4

# HOW TO INTERPRET THE HANDBOOK

Each perforated insignia which is distinctly different is listed and illustrated separately. For insignia which are similar or changed somewhat due to re-tooling of the dies, the insignia are deemed to be different. To avoid confusion, damaged dies, which appear to be something that they are not, are illustrated and identified as to their origin.

Every perforated insignia is presented in the following manner with the noted information.

<b>PERFIN NUMBER</b>	<b>CONTACT PHOTOGRAPH</b>	<b>LOCATION</b>	<b>USER'S IDENTIFICATION</b>	<b>EARLIEST POSTMARK</b>	<b>POSTOFFICE APPROVAL</b>

<b>COUNTRY</b>					
<b>LATEST POSTMARK</b>					

**PERFIN NUMBER** is the number allocated to each respective perforated insignia. Where there is a '-', the insignia is not what it appears to be and there is a reference to its origin where the user's name usually appears.

The perfin image in most cases was made by a **CONTACT PHOTOGRAPH** of one of the dies of the perforating machine. Keep in mind that most perforators had multiple dies, which were not identical, so hole alignment may not be exact. In other words, the **CONTACT PHOTOGRAPHY** is only a representation of the actual perfin die, and will not match, exactly, all perfin dies of the perfin number. The editors have attempted to maintain the correct image size when creating the PDF file. Various aspects of both the viewer's software and hardware in printing the PDF image may result in changes in the image size. Most perfins have the insignia in Position 1 that allows superimposition from the back, underside, of the stamp so that the colour and design of the stamp do not interfere with identification.

**LOCATION** is the city where the perforator was located while used by the company. In the case of a perforator being used in two or more cities, the cities are listed in chronological order of usage.

**USER'S IDENTIFICATION** is the name of the company that purchased the perforator. In most cases, it will also be the name of the company that operated the perforator. In the case of a company having more than one name (other than a takeover), the most recognized name is used. Attempts have been made to confirm the spelling of the names. Where no company name is listed, the owner/user remains unknown.

**EARLIEST POSTMARK** is a review of the known usage of the perfin by the BNAPS Study Group. Changes in some of the dates are to be expected over a period of time, but it does indicate confirmed years that a perfin has been used. Dates read: year/month/day.

**POST OFFICE APPROVAL** is the date on which the Post Office approved the use of a particular insignia, as shown in Addendum A. Where the company had one insignia approved it is deemed that the approval applied to all similar and/or later insignia so there is a referral to the approved insignia. Where no approval was given the space is blank. In the case where a perforator was located outside Canada and did not perforate Canadian postage stamps, a N/A (not applicable) confirms that Post Office approval was not required for Canadian revenue stamps that were perforated. For Newfoundland postage stamps, the Canadian approval regulations did not apply, as Newfoundland was not a member of Confederation at the time of perforating, thus the N/A. Dates read: year/month/day.

**PERFIN FACTOR** is an attempt to indicate the relative number of stamps reported with each insignia in the Study Group surveys and to provide a comparison for the collections reviewed. Below are the actual reported copies as of 1984. In 2011, the A, B and C factors remain actual count. The remaining factors will have higher actual counts but remain in proportion to each other. The factors including both postage and revenue stamps are as follows:

- A 1-3 reported copies
- B 4-10 reported copies
- C 11-30 reported copies
- D 31-100 reported copies
- E 101-300 reported copies
- F 301-1,000 reported copies
- G 1,001-3,000 reported copies
- H 3,001-10,000 reported copies
- I 10,001 and more reported copies

**COUNTRY** or countries where insignia found is an identification of the countries whose stamps have also been perforated with the same perforator. The United States (US) is the most frequent, but Newfoundland (NL), England (GB), Australia (AU), Trinidad & Tobago (TT) and Ireland (IE) are also listed. Note: all the Australia perforations are in Custom Duty (revenue) stamps, not postage stamps and were from an American perforator.

**INITIALS OF THE PERFORATOR** is the sequence of letters in the insignia. There are a number of symbols to help in describing perfin patterns.

/, as in **AR/ & Co** – everything after the / is on a line below.

-, as in **M-W/A** – shows a dash or marked space.

( ), as in **BC/C(o)** – the letter or letters inside the parentheses are enclosed within the letter preceding.

[ ], as in **[AC/o]** – all letters with the brackets share some pins with some or all the other letters within the brackets.

Lower case letter, as in **AR/ & Co** – letters shown as lower case in the listing are also lower case in the actual perfin.

., periods like **W.J.G** have been included in the initials.

<>, as in **<P>P/Co**, the letter(s) within the <> is reversed.

Note: code holes, as in **NLY**, have not been included in the initials.

**LATEST POSTMARK** is a review of the known usage of the perfin by the BNAPS Study Group. Changes in some of the dates are to be expected over a period of time, but it does indicate confirmed years that a perfin has been used. Dates read: year/month/day.

**ADDENDA & NOTES** is a notice that this insignia is referred to in addendum, and each reference is so noted as is anything considered significant enough to need special attention, subject to space required for the explanation.

**CATALOGUE NUMBERS** is a checklist of all stamp issues and reported for each perfin as dated on top of the page. The original list was prepared by Conrad Tremblay and recorded the perfin positions, for that information contact the BNAPS Perfin study group. The list has been added to as new stamps have been reported and stamp numbers have been changed to reflect the current 2015 catalogue stamp numbers. The stamps are listed in the following order using these catalogues:

Unitrade Specialized Catalogue 2015, style: 104, C1 or MR1

The Canadian Revenue Stamp Catalogue 2009 edition by E. S. J. van Dam, style: FX64 or NFC1

The Standard Canada Precancel Catalogue 5<sup>th</sup> Edition. The precancel number is composed of the Town Name or Bar, Style number (1 to 15) and the Scott Stamp Number [Hamilton 4-105]. The Town Name (Hamilton) is only shown on the first precancel number (Hamilton 4-105, 4-107) and not repeated on subsequent precancel numbers if there is no change in the Town Name. Capital "I" means inverted, capital "D" stands for double and capital "T" means triple. For a complete list of the precancel number system, see in "The Standard Canada Precancel Catalogue 5<sup>th</sup> Edition book.

Note: where the perfin is from Newfoundland, Unitrade Specialized catalogue (Newfoundland numbers are used without identification. Where a Newfoundland perforation is reported in a Canadian stamp, a NL is added prior to the Canadian stamp number.

**POSITIONS** are described in Addendum C DETERMINING A PERFIN POSITION.

## ADDENDUM SUMMARY

The following addenda are specialized data for those who wish to use them. Attempts have been made to anticipate most of your interests and the results of the data gathered by the Study Group are presented in the simplest form possible.

### Addendum A

## CANADIAN POST OFFICE APPROVALS

The list below was provided by the National Postal Museum in Ottawa and can be found in the "RG3, Post Office Department fonds, series C-2, volume 2333, file: 11-10-9, Perforated Postage Stamps – Use of". Illustrations of the approved perfin numbers were not available. The perfin numbers were determined by the Study Group. The **\*Place** (as recorded by the Post Office), we believe, is the location of the company applying for permission to use the perfin and not necessarily the location of the perforating machine.

\* Matching approval to perfin may be inaccurate.

+ No perfin discovered.

= No perfin discovered – only punch known.

## Addendum B

### DIFFERENCES BETWEEN SIMILAR PERFINS

B1 B2

The "B" in B1 is slightly smaller than the "B" in B2. B1 is found in stamps issued before 1931, mostly before 1922. B2 is only found in stamps issued after 1930.

B15 B16

The middle hole in B16, between the bumps on the "B", is out of alignment for a smooth curve. B15 is in stamps issued before 1949, B16 is in stamps issued after 1942.

C25 C26

In C25, the first 2 holes of the vertical bar of the "N" closest to the "R" are relatively close together, whereas in C26 there is a distinctly wider spacing. C25 stopped being used about 1948.

C27 C28

In C28, the top hole of the vertical bar of the "R" is opposite the middle hole of the vertical bar of the "N". In C27 the last hole in the "C" is close to being horizontal with the second hole down in the leg of the "N". The whole "C" is lower in C28. C27 is only found on stamps issued before 1930.

C33 C34

The last three holes in the tail "R" are in a straight line and evenly spaced in C33. In C34 the three holes are not evenly spaced, and the alignment is a curve downwards. If poorly perforated most likely C33 (C33 was replaced by C34).

C35 C35 (without code hole)

C35 without the code hole is similar to C33. After the C33 period, the perfin is C35. In C33 period, if several holes are blind or missing it is C33. Look for a postmark as C33 was used in Quebec & Maritimes whereas C35 in the Prairies.

C41 C42

C42 has one extra hole at the bottom of the "T". C42 is much more common and is known to be an incomplete perfin which may appear to be C41, so caution is advised and when in doubt, list as C42.

G16 G17

In G17, the hole below the crossbar on the "G" is centered on the two holes above it. G16 has a fuller curve on the bottom of the "G".

I2 I3

The letters in I3 are approximately 1/2 mm higher (1/2 a hole width) than the letters in I2.

L11 L12

The letters in L12 are approximately 1/2 mm (1/2 a hole width) higher than the letters in L11.

N6 N7

N6 has a normal sized "N", whereas N7 has a very narrow "N". Both these perfins have only three holes across the bottom of the "L".

N23 N24

The two code holes above the "Y" are close together in N23. N24 has the two code holes further apart, and the "N" is slightly wider.

N30 N31

There is a gap between both ends of the cross bar on the "N" and the two vertical parts of the "N" in N30. N31 has the cross bar much closer to the vertical parts of the "N", so the cross bar itself appears less vertical.

O9 O10

In O10, the third and fourth hole from the end of the "S" is vertical or close to vertical. In O9, these two holes are further apart and definitely not vertical.

P9 P10

The letters in P10 are approximately  $\frac{1}{2}$  mm ( $\frac{1}{2}$  a hole width) higher than the letters in P9.

P18 P19

The "P" in P19 is very symmetrical. The "P" in P18 is slightly more compact, and the angles of curvature on the "P" vary. P18 is not found on stamps after 1938.

S17 S18

The base of the letter "P" in S18 is approximately  $\frac{1}{2}$  mm ( $\frac{1}{2}$  a hole) longer than the base in the letter in S17.

T6

T7

T8

All of the above are usually found in Positions 2 and 4. T8 has large holes. The difference between T6 and T7 is that T7 has a narrower "A" and is usually poorly perforated.

2019 08 01

All of the above are usually found only in Positions 1 or 3. T9 is the most common and T11 is scarce. T9 is known in Admiral and Historical stamps and T10 is known in Admirals. The bottom of the "V" in T9 appears a bit wider. The horizontal bar of the "T" in T11 has a slight upward curve in it. The "A" in T10 is not as uniform as in T9 or T11. T11 is found in 1950s stamps.

In T12 the top of the "A" has a bulge in it and the lower half of the "V" is crooked and short. T12 is found in 1922 Admirals to the end of the War issue. T13 starts in the War issue and goes up to 1958. The entire shape of all letters is more uniform in T13 than in T12.

**GENERAL CAUTION:** All of the above listed perfins arise from multi-die perforators. Only those differences which are constant are mentioned. There will be minor differences among dies which must be taken into consideration.

## Addendum C

# DETERMINING A PERFIN POSITION

Perfin collectors, in their need to communicate with other perfin collectors, developed the word 'position' to identify the relationship between the perforated insignia and the stamp. Identification systems relating to the positions were proposed as early as 1939 for OHMS stamps and were based on keeping the stamp constant and noting the orientation of the perforated insignia when viewed from the front as shown in Figure 1.

Figure 1

Because there are approximately 350 different Canadian perfin types and tens of thousands worldwide, the editors proposed in a 1980 published article "Perfin Position: A New Approach", a simplified method of classification that may be applied to all perforated insignia. It is based on positioning the stamp so that the perforated insignia appears in its correct upright orientation.

Four orientations of the stamp are identified when looking at the design of the stamp and an additional four while viewing the reverse side.

On the design side, with the top of the design in the upright (12 o'clock position) a perfin pattern in its correct orientation will be identified as being in Position 1 as shown on the next page. If the design is not oriented correctly in Position 1, the stamp should be then rotated 90 degrees clockwise, and, if then its orientation is correct, the perfin is identified as being in Position 2. If still not oriented correctly, continue rotating the stamp 90 degrees at a time through Positions 3 and 4 attempting to view the pattern in its correct orientation.

Should none of these be successful, then turn the stamp to its reverse (gum) side with the top of the stamp's design at the upright (12 o'clock) position. If the perfin pattern is now oriented correctly, it is identified as being in Position 5. If not, continue as before, turning 90 degrees at a time clockwise, through positions 6, 7 and 8 until the perfin pattern is oriented correctly.

*The information herein is copyrighted and owned exclusively by the British North America Philatelic Society who makes the information freely available to the philatelic community.*

## **Addendum D**

# **PERSONAL INSIGNIA, CANCELLING PERFORATIONS AND PUNCHES**

This section is commonly referred to as Back of the Book (BOB) perfins. By definition the following are not perfins. Much of the work done in this addendum was completed by Mark Fennell.

### **PERSONAL INSIGNIA**

Personal insignia at first glance would appear to be another perfin. However the perforation's primary function is not identification for postal security purposes. Also noteworthy, all are relatively modern creations.

A novelty creation by David G. Hannay of Kincardine ON using the top of the "P" from a PAID perforator.

Used by Edwin C. Haack of Portland and is reported by the Catalog of United States Perfins as a personal perfin.

Stamp dealer F. E. Eaton and Sons of Vancouver BC. The inconsistent use of this perforator is considered personal.

John Reid of Lantzville BC used this perforator in the 1970s in conjunction with a stamp exchange service which he ran.

Latin America Philatelic Society. The society secretary, Piet Steen of Hinton AB, used this personal perfin on society mail in the 1980s & 1990s.

The "Lighthouse" perfin was created for use at VALPEX, stamp exhibition sponsored by the Virginia Philatelic Association.

Used by John Lyding, of the USA, between 1985 & 2003 on ship mail and is reported by the Catalog of United States Perfins as personal.

COMPEX Stamp Show is the annual exhibition of the Combined Philatelic Exhibition of Chicagoland. Used on stamps 418, 419, 420, 425 & 425

**CANCELLING PERFORATIONS**

Cancelled Colonial Secretary's Office, St. John's NL. Reported on NL Inland Revenue Stamp series – 1898 Queen Victoria, 1907 King Edward VII, 1910 King George V, 1938 Caribou & 1943 Caribou. Found on NL passports.

CANCELLED This cancel is reported on the Canada War Tax, Excise Tax, 1913 Ontario Stock Transfer Stamps and Quebec Stock Transfer Stamps. Also on Yukon law stamps.

2021 08 01

CANC'L cancellation used on Manitoba law stamps of various issues but more commonly after 1892.

Customs House, St. John's NL. This cancel is reported on NL Inland Revenues, 1898 Queen Victoria – NFR4, 6 & 6a only.

Customs House, St. John's NL. This cancel is reported on NL Inland Revenues, 1898 Queen Victoria – NFR4, 6 & 6a and on various postal issues including NL257.

Co. Is a portion of large private perfin, unknown user. Found on Ontario Stock Transfer stamps including OST 33.

## SPECIMEN PERFORATIONS

Found on the NL 1932 Definitive Issue including 185, 187, 188, 190, 197 & 198.

Found on the NL 1935 King George V Silver Jubilee Issue.

Found on NL 168 & 212

**PAID CANCELS**

A cancelling device of various sizes and type styles (with 4, 5, 6 and 7-hole patterns) used by Canadian banks to indicate that cheques, drafts etc. had been paid. During the period that these items were subject to an excise tax, which could be paid by affixing revenue or postage stamps to the document, the PAID sometimes perforated the stamp, which was accidental and not intentional.

Unknown user – Found on Quebec Registration stamps QR5, QR10 and QR11.

The user was "Honey, Longpre & Cherrier" Clerks of the County Court and Registrars of the Supreme Court in Quebec. Found on QL16, QL17, QL24, QL34, QL37, QL42, QL51 and QL53.

2021 08 01

Found on NL Queen Victoria 1898 and 1910 King George V Inland Revenue Stamps.

Found on NL Queen Victoria 1898, 1907 King Edward VII, King George V 1910 and 1938 Caribou Issue Inland Revenue Stamps.

## MISCELLANEOUS PERFORATED CANCELS

See an interesting article in "Canadian Revenues, Volume 6, Ontario and Quebec, on electronic CD or DVD by Edward Zaluski.. This cancel is found on 1871-90 Quebec Law Stamps in various stamp perforations e.g. 11½ x 12 and 12. Note the missing pin in the "1".

Luxury Tax cancelling perforators were issued, starting in mid-1920 by the Department of National Revenue to merchants to cancel stamps, on invoices, which represented the amount of Luxury Tax imposed on certain items. An informative study on the subject was made by Christopher D. Ryan in the Canadian Revenue Study Group's newsletter #20 (Feb 1998) and #26 (May 1999). Found on various King George V Admiral postal issues as well as on War Tax, Excise Tax, Electric Light Inspection, Ontario Stock Transfer stamps and on Ontario and Yukon Law stamps. Also found on Quebec Prohibition stamps QP3.

User unknown. Found on FX11, 14, 16, 19, 44, 45, 94.

Unknown user. Found on 3¢ Queen Victoria 1898 Jubilee stamp, postally used.

Unknown user. Found on Quebec Registration stamps.

Unknown user. Found on FX64 Excise stamp.

2021 08 01

Unknown user. Found on FX11 Excise stamp.

User unknown. Found on MR4. Often used as space filler on cheque punch.

Snowflake or Geometric design. Found on 1898 Queen Victoria issue of Inland Revenue stamps of Newfoundland. Seen on 5¢, 10¢, 25¢, 50¢, 75¢ & \$1, known as NFR1 to 6.

Kodak Film (Toronto, Vancouver and elsewhere) identification either alpha-numeric or just numeric in nature. Used on incoming packages of film for development as identification. That the perforation came in contact with a stamp was incidental. Found on a variety of Canadian postage stamps.

Similar to Kodak but with larger holes and more spacing. User and purpose unknown but we think part of date.

Some cancelling devices had 2 lines, the top one PAID and the second the day, month and year. This is thought to be December 22, and is on a Canada Bill stamp FB49.

Found on a Canadian Revenue Excise stamp. Uses and purpose unknown but could be date.

2021 08 01

A pin perforation found on Canada #233 postage stamp also on #89 with Montreal PC. User unknown.

## PUNCHES

A. E. Ames & Company of Toronto ON was approved to perforate stamps on October 15, 1912, but to date there is no record of perforated stamps only punches. Found on postage stamp 236, FWT7, 11 & 15 and FX4, 5, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 24, 39, 40, 41, 43, 44, 62, 64, 67 & 71. AEA punch also seen frequently on Ontario Stock Transfer stamps.

A. McKim Co. Ltd of Montreal QC. Found on FWT 7, 11, FX8, 10, 14, 18, 19, 42 & 43 and OST 21, 22, 23, 24, 25 & 33.

B unknown user. Found on Ontario Stock Transfer stamps.

DC unknown user. Found on Quebec Registration Stamps 1870 issue.

DR unknown user. Found on OST5 & 13.

INS unknown user. Found on Ontario Law Stamps 1870 issue.

S Perhaps used in the Sheriff's Office, Montreal. Found on Quebec Law stamp with identifying circular date cancel (cds) on face.

SS which is thought possibly to be Sanitary Stationery Co. Found on FWT9

TGTC Toronto General Trusts Corporation found on FWT11, OST22, OST23 and OST24.

User not known. Found on Ontario stock Transfer Tax stamps OST22 and OST25, the George V War tax stamps FWT7 and FWT15 as well as on Two Leaf Excise Tax stamps Fx40 and FX42.

WG Wood Gundy of Toronto ON. Found on FWT 7, 8 & 11, FX 5, 8, 9, 10, 11, 13, 14, 15, 16, 17, 18, 19, 36, 38, 39, 40, 41, 42, 43 & 44, OST 5, 7, 9, 11, 13, 15, 16, 17, 18, 20, 21, 22, 23, 24, 25, 33, 34, 35 & 36 and QST 14, 15 & 20.

Numerals 1 and 5 on 3¢ Small Queens postally used. User and purpose unknown.

## Addendum E

# PERFIN GLOSSARY

**BASE** – The basic metal bottom on which all parts of the machine are mounted. See *Parts of a Perforating Machine* photo at the end of Glossary.

**BLIND PIN** – When perforating pin makes an indentation in the stamp without cutting through it. Sometimes is the result of too many sheets of stamps in the perforator.

**BENT PIN** – See Broken Pin

**BROKEN PIN** – When a pin is broken off and is too short to touch the stamp during perforating, there will be no hole in the stamp. If a pin falls out of the machine or is bent within the machine, the resultant lack of a hole is also referred to as a Broken Pin.

**CODE HOLE** – A hole surplus to the normal design or initials but which is usually included to characterize a different machine.

### COLLECTIONS

**Perfin Type Collection** - Has one example of each perfin type.

**Perfin Issue Collection** - Has one example of every different catalogue numbered stamp possible for each perfin type.

**Perfin Position Collection** – Is an expansion of an Issue Collection to include as many as possible of the eight different positions.

**CONTRIVED PERFIN** – a stamp perforated with a corporate or government perforator by someone other than the perforator owner.

**DAMAGED DIE** – A die that has a broken or missing pin(s). A Damaged Die produces incomplete perfins.

**DAMAGED PERFIN** – A damaged stamp which has been perforated, and thus less desirable.

**DIE** – A set of pins to make one complete design or set of initials, including a code hole if applicable. Each die is unique.

**DIE PLATING** – Is the reconstruction of the positions or order of the dies within the machine. In the process, one may or may not identify the different dies recognizing the unique locations of the pins relative to each other.

**DOUBLE PERFIN** – Where one stamp has been through two or more perforating operations (two or more downward movements of the head). Note: A stamp having parts of two neighbouring dies is not a double perfin.

**Perfect Double Perfin** – Where two perforating operations are so close that each hole cuts itself on the second operation.

**Overlap Double Perfin** – Where the outline of the second perforation overlaps with the outline of the first.

**Non-Overlap Plus Double Perfin** – Where two operations are found in a stamp. The outlines of the perforations do not overlap and the total number of holes is greater in the stamp than in one operation.

**Non-Overlap Minus Double Perfin** – Where two operations are found in a stamp. The outlines of the perforations do not overlap and there are fewer total holes in the stamp than in one completed operation.

**Multi-Position Double Perfin** – Where two perforating operations result in two different positions appearing in the same stamp. The multi-position double can exist as any of the above doubles, except the Perfect Double.

**FAKE PERFIN** – Where an individual has fraudulently altered a stamp or perfin to make it appear to be a something other than what it originally was.

**FAVOUR PERFIN** – See *Contrive Perfin*

**FEEDER PLATE** – The steel plate attached to the base of the perforator upon which the sheets of stamps are laid as they are fed into the perforator. See *Parts of a Perforating Machine* photo at the end of Glossary.

2019 08 01

**GUIDE** – The metal plate between the head and the perforating plate that holds the pins in alignment when they are not in the perforating plate. See *Parts of a Perforating Machine* photo at the end of Glossary.

**HEAD** – The horizontal male steel bar in which the perforating pins are set. Designed to hold one or more dies, the head moves up and down during the perforating action. See *Parts of a Perforating Machine* photo at the end of Glossary.

**HOLE** – the circular space left in the stamp after a pin has cut its way through the stamp.

**INCOMPLETE PERFIN** – Where a perforation is completely on the stamp but does not have all of the holes in the design perforated through the stamp because of a missing, broken or bent pin in the die. See also Partial Perfin and Split Perfin.

**MINT PERFIN** – An uncanceled perfin with full gum. Since perfins are intended to serve as security against use of other than the company's business purposes, many of these mint stamps are probably stolen property or contrived perforated.

**MISSING PIN** – When a pin is broken off, missing or is too short to touch the stamp during perforation, there will be no hole in the stamp.

**OFFICIAL PERFIN** – A perfin used by a Government department or agency.

**Federal Official** – A perfin used by more than one Canadian Federal Government department or agency including OH/MS O8, O9 & O10.

**Federal Departmental Official** – A perfin used by a single Canadian Government or its agency like MD M9 and ND N3.

**Provincial Official** – A perfin used by more than one Canadian Provincial Government department or agency like LA L1 and PS, P18 and P19.

**Provincial Departmental Official** – A perfin used by a single Canadian Provincial Government department or its agency like Q/CLQ/C Q1.

**PAIR** – A joined pair of stamps, each being a perfin.

**Mirror Pair** – A joined pair of stamps each with the same perfin type but one in reverse to its mate. Created by folding a pane of stamps prior to operating the machine.

**Perf-Imperf Pair** – A joined pair of stamps with only one of the stamps having a perforation in it.

**Position Pair** – A pair of stamps with a different position in each but not a Mirror Pair.

**PARTIAL PERFIN** – A stamp in which the outline of at least one complete design cannot be found in the stamp. Also see Incomplete and Split Perfin.

**PERFIN** – A postage or revenue stamp perforated for security purposes, with a series of holes in the shape of a design or initials (not used for cancelling the stamp to prevent reuse).

**Perfin Factor** – The relative scarcity of perfin types reported to the BNAPS Perfin Study Group survey. The 'A' rating is the scarcest and the numerical details can be found in Chapter 5.

**Perfin Issue** – A perforation in a stamp with a specific catalogue number. Sometimes generalized into a specific set of stamps.

**Perfin Number** – The handbook number allocated to each perfin type illustrated in this book.

**Perfin Position** – The changing position of the perforation relative to the design of the stamp in an upright position, the result of feeding the stamps upright, sideways or inverted through the perforator. See Addendum C for specific details.

**Perfin Type** – A designated design or set of initials. All dies within one machine are deemed to be the same Perfin Type.

**PERFORATED INITIALS** – See Perforated Insignia

**PERFORATED INSIGNIA** – Frequently interchanged with Perforated Initials, both of which are permuted to 'perfin'. Perforated insignia usually refer only to the holes in the stamp, whereas a Perfin is the stamp that has the holes in it.

**PERFORATING PLATE** – The horizontal female steel bar with drilled holes to accept the pins cutting holes in through the stamp. See *Parts of Perforating Machine* at the end of Glossary.

**PERFORATION** – The series of holes produced by the pins of a perforating machine die.

**PERFORATOR** – A hand-cranked or electrically-operated machine with one or more dies used to perforate initials or designs in stamps.

**PIN** – A flat ended, cylindrical, metal needle that cuts one hole in a stamp. See *Parts of a Perforating Machine* at the end of Glossary.

**PERSONAL PERFIN** – A perforator in the hands of an individual or company for whom the primary reason for using the perforation is not for security purposes. Generally, these perfins are used by collectors who simply like to have their own personal perforator.

**PHILATELIC PERFIN** – properly used stamp with corporate or government security perforation.

**PRIVATE PERFIN** – a perfin used by a company rather than a Government department or agency.

**PROOF** – A complete example of all dies produced by a perforating machine, perforated in a single piece of paper or joined postage stamps.

**RANDOM HOLE** – A hole surplus to the design or initials in the stamp and is not a code hole. It is the result of a double perforation with one perforation being very incomplete, thus more than one Random Hole may appear in any given stamp.

**RE-DRILLED DIE** – Some dies, because of wear, damage or corporate change, are re-drilled creating a noticeable change in the size of the holes or die pattern. The new dies are deemed to be a new perfin. See C15 and C16 re-drilled.

**SPLIT PERFIN** – Where the stamp is improperly placed in the perforator, resulting in part of two adjoining dies perforating a single stamp. Neither die is complete within the stamp, but if combined, will become greater than one complete perforation. In most cases a split will be horizontal relative to the perforation. Frequently the Split Perfin is a result of the stamps being different size from that for which the machine was designed.

*Abbreviations frequently used in describing a perfin:*

Ax/Bx - The letters Ax are above the letters Bx

DP - Damaged Perfin

IP - Incomplete Perfin

PF - Perfin Factor

PP - Partial Perfin

SP - Split Perfin

## Addendum G

# PRECANCELS via Precancel Numbers

The following addendum is based on an updated precancel perfin list gathered by the editors of The Standard Canada Precancel Catalogue, 5<sup>th</sup> Edition with additions found in Chapter 5 of this handbook. The complete list was then reviewed and corrected by the precancel editions to reflect the current knowledge in the precancel field. Only Scott stamp numbers are identified. A special thanks is given to David Marasco for his help on preparing this addendum. If you have one of these precancel perfins, please contact the [PerfinEditor@bnaps.org](mailto:PerfinEditor@bnaps.org). NOTE - °Contrived Mint

## Addendum H

# REVENUES via Revenue Numbers

The following addendum is based on The Canadian Revenue Stamp Catalogue (2009 Edition) by E.S.J. van Dam, with additions found in Chapter 5 of this handbook. The complete list was compiled Jim Graham with the help of members of the BNAPS Perfin Study Group and reviewed and corrected by Kerry Bryant. If you have additional items to add or entries to correct, please contact [perfineditor@bnaps.org](mailto:perfineditor@bnaps.org) or [jdgraham2@gmail.com](mailto:jdgraham2@gmail.com). Note - °Contrived

## ***Addendum I***

# **SUN LIFE ASSURANCE COMPANY OF CANADA PERFORATORS**

Much of the work done in this addendum was completed by Conrad M. Trembley and updated by Jim Graham.

The addendum, first appeared in 4<sup>th</sup> edition of the CANADIAN STAMPS WITH PERFORATED INITIALS, is an extract from the newsletter BNA Perforator, Volume 5, Number 6, of an article by Conrad M. Trembley, titled "The Sun Life Perforators". The Different 5-Die Sun Life Perforators, a Look at the 19 Perforators Used in Canada". This article does not review the S15 and S21 perforators, as they are distinctly different from the nineteen similar S22 perforators.

The originals for the following reproductions were made from accurate vacuum-made, contact print, and show clearly, the true appearance of the pattern for reliable references. In this addendum we had to use scans from the 4<sup>th</sup> edition, therefore the proofs are not to scale. IF ACTUAL SIZE OF PROOF IS REQUIRED, PLEASE CONTACT [PerfinEditor@bnaps.org](mailto:PerfinEditor@bnaps.org).

The plating for 11 perforators is completed, leaving unfinished, the following perforators: 8, 11, 12, 13, 15, 16, 17 and 18. For the perforators used in these cities, the five dies are shown – but not in the proper sequence as they appear in the perforator, from left to right. However, for the perforators No.15 and 16, the die shown in position 1 (on the left) belongs to the location in the plating. The dies in position 1 and 2, for the perforator No. 18, also belong to their respective locations in the plating.

Finally, take note that the distance between each pattern is approximate. Only a punch from the perforator, showing the five dies on the strip of stamps or plain paper, would give us an exact image of the spacing between them.

Assistance is requested to complete the sequential die plating of the eight perforators listed above. Please send me contact prints of any large regular or commemorative stamps, pairs, or multiples (where two or more dies are shown), which are from these eight specific perforators.

**THE DIFFERENT 5-DIE SUN LIFE PERFORATORS**

\*Note: Die sequence unconfirmed
